

Diagram illustrating the relative widths of text elements within a container. The container is divided into three sections, each with a different background color (yellow, light blue, and yellow) and a blue border. The text elements are colored to match their background.

Section	Background Color	Text Color	Text Content	Relative Width
1	Yellow	Red	Hello Gopher!	10%
2	Yellow	Green	er!	20%
3	Yellow	Blue	Relative width=30%	30%

MOST of the adventures recorded in this book really occurred; one or two were experiences of my own, the rest those of boys who were schoolmates of mine. Huck Finn is drawn from life; Tom Sawyer also, but not from an individual--he is a combination of the characteristics of three boys whom I knew, and therefore belongs to the composite order of architecture.

The odd superstitions touched upon were all prevalent among children and slaves in the West at the period of this story--that is to say, thirty or forty years ago.

Although my book is intended mainly for the entertainment of boys and girls, I hope it will not be shunned by men and women on that account, for part of my plan has been to try to pleasantly remind adults of what they once were themselves, and of how they felt and thought and talked, and what queer enterprises they sometimes engaged in.

and thought and talked, and what queer enterprises they sometimes engaged in.

what they once were themselves, and of how they felt and thought and talked, and what queer enterprises they sometimes engaged in.

Diagram illustrating the relative widths of nested boxes. The text "Hello Gopher!" is centered within a yellow box. This yellow box is centered within a green box. The green box is centered within a blue box. The text "Relative Width=10%" is displayed below the yellow box, indicating its width relative to the green box. The text "20%" is displayed below the green box, indicating its width relative to the blue box. The text "0%" is displayed below the blue box, indicating its width relative to the outermost container.

Diagram illustrating text alignment and width calculation. The text "Hello Gopher!" is shown in three different boxes, each with a different relative width and alignment:

- Yellow box: "Hello Gopher!" (Relative Width=10%, Left-aligned)
- Red box: "Hello Gopher!" (width=20%, Left-aligned)
- Black box: "Hello Gopher!" (width=30%, Left-aligned)

The diagram illustrates the concept of relative width in CSS. It shows a series of nested boxes. The outermost box is yellow and contains the text "Hello Gopher!". Inside this box is a smaller white box, also containing "Hello Gopher!". Inside the white box is a green box containing "Hello Gopher!". Inside the green box is a smaller white box containing "Hello Gopher!". The text "Relative Width=10%" is written in green next to the innermost white box. The boxes are nested such that each inner box is centered within the outer box, and the width of each inner box is 10% of the width of the outer box it is contained within.
